Fire Control Prevention and Emergency Medical Services District

2024-2025 Quarterly Report Fire, EMS and Fire Marshal

March 2025

- iPads for patient care reporting (PCR) are now in service. Better portability, efficient, still secure.
- T-3 was in the shop for preventive maintenance and various repairs throughout most of March. There is an item still on the ladder that requires troubleshooting related to a digital display (small tv screen). Once this is resolved, we can proceed with scheduling the annual ladder testing.
- Pump testing has occurred for Ladder 22 & T-3, with no issues.
- Consumables for the drill field, such as hay and propane, have been ordered for in-house training and rental purposes. Currently, we are holding a fire academy that commenced shortly after Spring Break, which will make use of these resources. Additionally, our drill field is being reserved for rentals, further necessitating the use of these items.
- Biannual PPE inspection is complete and gear has been repaired and cleaned to maintain compliance with NFPA. 119 items sent, only 8 pairs of suspenders recommended for retirement, no coats or pants taken out of service. Each item receives ~\$52 worth of repairs. By continuing this process we minimize high dollar repairs and minimize the risk of gear being taken out of service.
