I. INTRODUCTION AND SUMMARY

Midtown Engineers, LLC was retained to analyze the intersection of Center Street at Railroad Avenue, located in the City of Deer Park, Harris County, Texas (Key Map 538F). The study location is shown in **Exhibit 1**. Illegal left turn movements from Railroad Avenue onto Center Street created damage to the Gateway Improvements on Center Street.

The study was comprised of the following tasks:

- Analysis of existing conditions based on collected traffic counts and lane geometry
- Develop alternatives to eliminate the illegal left turn movements at the intersection of Center Street and Railroad Avenue

II. EXISTING CONDITIONS

This section outlines the characteristics of the approach roadways, the intersection of the roadways, and the current land use of the study area.

A. Center Street

Center Street runs in the north-south direction through the City of Deer Park. It begins at State Highway 225 Frontage Road and terminates just south of Fairmont Parkway. It is comprised of a four-lane section with left turn lane pockets within the study area. Center Street turns into a private industrial street, with gated entry, just north of SH 225 Westbound Frontage Road. The land use along it is commercial. Street lighting is present along Center Street. The posted speed limit on Center Street, within the study intersection, is 40 MPH.

B. Railroad Avenue

Railroad Avenue runs in the east-west direction. It begins at Deerwood Glen Drive and terminates at Center Street. It has two westbound lanes and one eastbound lane. The land use along Railroad Avenue is composed of general industrial, office professional and general commercial. The posted speed limit on Railroad Avenue is 40 MPH.

C. State Highway 225 Frontage Road

State Highway (SH) 225 Frontage Road, runs parallel to SH 225, in the east-west direction with three lanes in each direction within the study area. SH 225 is continuous through the study area. The posted speed limit on SH 225 Frontage Roads is 50 MPH.

D. Robin Street

Robin Street runs in the north-south direction. It begins at Railroad Avenue and terminates within an industrial area, just north of SH 225 Westbound Frontage Road. The land use along Robin Street is industrial.

E. Intersection Characteristics

Center Street and Railroad Avenue is a T-intersection, where Railroad Avenue T's into Center Street. Eastbound left turn movements from Railroad Avenue to Center Street is prohibited, with "NO LEFT TURN" signs at the intersection. Northbound left turn movements from Center Street to Railroad Avenue is allowed.

During a field visit in the afternoon, there were school buses traveling north on Center Street and turning left onto Railroad Avenue. Upon reviewing the Deer Park Independent School District's (ISD) Route List, see **Appendix D**, Railroad Avenue was not on the list. Midtown Engineers contacted the Deer Park ISD Department of Transportation to verify. A representative from the department said there are school buses traveling north on Center Street and turning left onto Railroad Avenue during the school days.

F. Land Use

The study intersection is located in the City of Deer Park in Harris County, Texas. According to Houston-Galveston Area Council (H-GAC), the properties surrounding the study intersection are composed of mostly commercial and residential. An existing condition diagram of this intersection is shown in **Exhibit 2**. **Appendix B** contains photographs of each approach of the study intersection.

III. TRAFFIC DATA

The traffic data collected for this intersection includes the AM and PM peak hour vehicle turning movement counts (TMC).

A. Traffic Volumes

The AM and PM peak hour vehicle turning movement counts were recorded at the study intersection on Thursday, April 22, 2017 from 6:00 to 8:00 A.M. and 4:00 to 6:00 P.M. The complete traffic data can be found in **Appendix C**. A summary of the data is presented in **Table 1**. The peak-hour turning movement counts are shown in **Exhibit 3**.

Table 1: Vehicle Volume Summary

Time Period	Traffic Volumes (vph)			
	Northbound	Southbound	Eastbound	Westbound
Center Street at Railroad Avenue				
6:00 – 7:00 AM	810	333	103	N/A
7:00 – 8:00AM	673	604	133	N/A
4:00 – 5:00 PM	650	661	176	N/A
5:00 – 6:00 PM	506	862	163	N/A
Center Street at SH 225 Eastbound Frontage Road				
6:00 – 7:00 AM	776	222	214	20
7:00 – 8:00AM	623	397	334	21
4:00 – 5:00 PM	618	439	471	116
5:00 – 6:00 PM	506	656	487	93
Center Street at SH 225 Westbound Frontage Road				
6:00 – 7:00 AM	505	13	0	294
7:00 – 8:00AM	433	6	2	472
4:00 – 5:00 PM	403	191	2	579
5:00 – 6:00 PM	289	223	2	1087
Robin Street at SH 225 Eastbound Frontage Road				
6:00 – 7:00 AM	108	7	321	0
7:00 – 8:00AM	125	19	392	0
4:00 – 5:00 PM	230	14	342	0
5:00 – 6:00 PM	192	35	406	0
Robin Street at SH 225 Westbound Frontage Road				
6:00 – 7:00 AM	141	0	11	590
7:00 – 8:00AM	120	0	4	508
4:00 – 5:00 PM	36	1	3	716
5:00 – 6:00 PM	24	1	13	963

IV. TRAFFIC OPERATIONS ANALYSIS

A. Existing Condition

Capacity analysis for the existing conditions was conducted using the methodologies defined in the Highway Capacity Manual (HCM 2010). The software program, Synchro Version 9.1, was used to conduct the analysis. The traffic operations for each movement, at signalized and unsignalized intersections, were reported in terms of Level of Service (LOS) and the corresponding control delays. The LOS criteria as defined in HCM for signalized and unsignalized intersections are detailed below.

i. Level of Service

The LOS is assigned based on the intersection delay; **Table 2** lists the different levels according to the Highway Capacity Manual (HCM) 2000. Most major urban areas within the United States, LOS A-D is considered an acceptable LOS, while LOS E is considered marginal and LOS F is considered unacceptable. For intersections operating at LOS D or below, reasonable efforts have been made to maintain the existing LOS.

The LOS at unsignalized intersections is determined by the average delay a vehicle experiences on each intersection approach. Therefore, a different LOS is reported for each approach.

The LOS at signalized intersections is determined by the average vehicle delay. Values can be reported for the intersection as a whole or each individual movement.

Table 2: LOS Criteria for Signalized and Unsignalized Intersections

	Signalized Intersections	Unsignalized Intersections
A	< 10	0-10
B	> 10-20	> 10-15
C	> 20-35	> 15-25
D	> 35-55	> 25-35
E	> 55-80	> 35-50
F	> 80	> 50

Source: Highway Capacity Manual 2000 (Chapter 16 and 17)

The results of the capacity analysis for 2017 existing conditions are indicated in **Table 3**. It can be seen from the results table that all intersections operate at an acceptable LOS B or better during the AM and PM peak hour.

Since HCM methodology does not provide intersection-wide delay for Stop-Controlled operation, (Center Street at Railroad Avenue), the LOS of the intersection approaches and individual movements were analyzed. The results of the LOS for the unsignalized intersection of Center Street at Railroad Avenue is summarized in **Table 3**.

Table 3: Existing LOS and Delay (seconds/vehicle)*

	AM PEAK HOUR		PM PEAK HOUR	
STOP CONTROLLED INTERSECTION	Northbound Left Turn	Eastbound Right Turn	Northbound Left Turn	Eastbound Right Turn
1 - Center Street at Railroad Avenue	A (2.9)	B (10.7)	A (2.4)	B (11.3)
SIGNALIZED INTERSECTION				
2 - SH 225 EB FR at Center Street	B (12.0)		B (14.5)	
3 - SH 225 WB FR at Center Street	B (12.7)		B (17.6)	
4 - SH 225 EB FR at Robin Street	B (13.6)		B (15.3)	
5 - SH 225 WB FR at Robin Street	B (15.3)		B (18.9)	

*signal timing based on Synchro's default values

The existing LOS for all five intersections are at LOS B or better. When this report was prepared, the signal timing plans for SH 225 Frontage Road (eastbound and westbound) at Center Street and Robin Street, was requested but was not available. Therefore, the analysis was based on the optimized pre-time created by Synchro.

V. ALTERNATIVES

Four alternatives were developed to help eliminate the illegal left turn movements at Center Street and Railroad Avenue. The details for each alternative is listed below.

Alternative 1: Close the median on Center Street at Railroad Avenue

Alternative 1 proposed to close the median at Center Street. The existing northbound left turns, from Center Street onto Railroad Avenue, will be prohibited. Traffic will be rerouted through Intersection 2, 3, 4 and 5 to return to Railroad Avenue. The rerouted traffic was analyzed in Synchro and the results are summarized below in **Table 4**.

Table 4: Alternative 1: LOS and Delay (seconds/vehicle)*

	AM PEAK HOUR		PM PEAK HOUR	
STOP CONTROLLED INTERSECTION	Northbound Left Turn	Eastbound Right Turn	Northbound Left Turn	Eastbound Right Turn
1 - Center Street at Railroad Avenue	N/A	B (10.7)	N/A	B (11.3)
SIGNALIZED INTERSECTION				
2 - SH 225 EB FR at Center Street		B (11.9)		B (14.5)
3 - SH 225 WB FR at Center Street		B (12.6)		B (17.4)
4 - SH 225 EB FR at Robin Street		B (12.8)		D (50.3)
5 - SH 225 WB FR at Robin Street		B (14.7)		B (19.2)

When compared to existing AM and PM LOS and delay, Alternative 1's AM LOS remain the same at LOS B, with minor changes to the delay. In the PM peak hour, all intersections but intersection 4, remain the same LOS B. Intersection 4 LOS changed from LOS B (existing) to D (Alternative 1). This is due to the over capacity of the shared left turn and through movement.

Alternative 1 will also impact the existing school bus routes, which travel north on Center Street and turn left onto Railroad Avenue, during the non-peak hours.

Alternative 2: Convert Railroad Avenue into a one-way street (westbound)

Alternative 2 proposed to convert Railroad Avenue into a one-way street, westbound only, starting at the intersection of Robin Street and Railroad Avenue and ending at Center Street. The existing Railroad Avenue eastbound right turn traffic onto Center Street will be rerouted through intersection 5, where vehicles will turn left onto Robin Street, then right onto SH 225 Eastbound Frontage Road, and then right onto Center Street at intersection 2. The rerouted traffic was analyzed in Synchro and the results are summarized below in **Table 5**.

Table 5: Alternative 2: LOS and Delay (seconds/vehicle)*

	AM PEAK HOUR		PM PEAK HOUR	
STOP CONTROLLED INTERSECTION	Northbound Left Turn	Eastbound Right Turn	Northbound Left Turn	Eastbound Right Turn
1 - Center Street at Railroad Avenue	A (3.1)	N/A	A (2.7)	N/A
SIGNALIZED INTERSECTION				
2 - SH 225 EB FR at Center Street	B (11.4)		B (15.5)	
3 - SH 225 WB FR at Center Street	B (12.7)		B (17.6)	
4 - SH 225 EB FR at Robin Street	B (11.1)		B (12.9)	
5 - SH 225 WB FR at Robin Street	B (15.3)		B (18.9)	

When compared to the existing AM and PM LOS and delay, Alternative 2's LOS remain the same at LOS B, with minor changes to the delay. Intersection 4, the AM and PM overall intersection delay improved with the rerouted vehicles. This is because the existing northbound right turn has very low delay, and the rerouted vehicles actually make a right turn on red. In Synchro, the overall intersection delay is a weighted average of all movements at the intersection. Therefore, increasing the volume to a movement with low delay does increase the weight for that movement and result in a decreased overall intersection delay.

Alternative 3: Add a right-turn only diverter on Railroad Avenue at Center Street

Alternative 3 proposed a right-turn diverter, similar to the example shown in **Figure 1**. The diverter is proposed to be positioned at the approach to an intersection that orients vehicles to making a right-turn movement only. Also, with Alternative 3, it is proposed to replace the existing "No Left" (R3-2) turn signs with "Right Turn Only" (R3-5R) signs. Alternative 3 will not alter the existing traffic flow, therefore the existing LOS and delay shown in **Table 3** apply.

Source: https://www.phoenix.gov/streetsite/Documents/d_039263.pdf

Figure 1: Right Turn Diverter

Alternative 4: Add a non-traversable directional median on Center Street

Alternative 4 proposed adding a directional non-traversable median, with a left turn bay, for the northbound left turn movement on Center Street. See example shown in **Figure 2**. Alternative 4 will not alter the existing traffic flow, therefore the existing LOS and delay shown in **Table 3** apply. This separator would prevent the eastbound left turn movement from Railroad Avenue, where the access becomes right-in/right-out only with just two conflict points.

This Alternative will require additional pavement on Center Street. The pavement would need to widen to 66-feet, from its existing 64-feet, with five 11-foot lanes (two southbound and three northbound) and 11-foot median/left turn lane.

VI. CONCLUSION AND RECOMMENDATIONS

The four alternatives presented above would help to eliminate the illegal eastbound left turn movement from Railroad Avenue onto Center Street. Alternative 1 proposed the closing of the median on Center Street, which will eliminate northbound access from Center Street to Railroad Avenue. This alternative will provide the most permanent solution to the illegal left turn, it will alter the traffic flow for a period of time until drivers adapt to the closure and find alternative routes. The traffic operation analysis in Synchro shows this alternative will have the same LOS as the existing for most of the intersections, except for the SH 225 Eastbound Frontage Road at Robin Street intersection, where the LOS is reduced from a B to D.

Alternative 2 proposed converting Railroad Avenue from a two-way to a one-way (westbound) roadway. This alternative will reroute all existing eastbound movement on Railroad Avenue to the intersection of Railroad Avenue and Robin Street and SH 225 Eastbound Frontage Road. Similarly to Alternative 1, it will alter the traffic flow for a period of time until drivers adapt to the closure and find alternative routes. The traffic operation analysis in Synchro shows this alternative will have the same LOS as the existing condition.

Alternative 3 proposed adding a right-turn diverter on Railroad Avenue to force all vehicles to make a right turn. This alternative will replace the existing no left turn signs with right turn only signs. This alternative will not alter the existing traffic flow.

Alternative 4 proposed a directional median with a left turn lane on Center Street to manage the illegal left turn movements on Railroad Avenue. This alternative will not alter the existing traffic flow, but will require additional pavement.

In summary, Alternative 3 is recommended, as it provides an immediate viable solution with minimum cost and no impact to existing traffic flow. Alternative 4 could supplement Alternative 3 at a later date with appropriate funding.

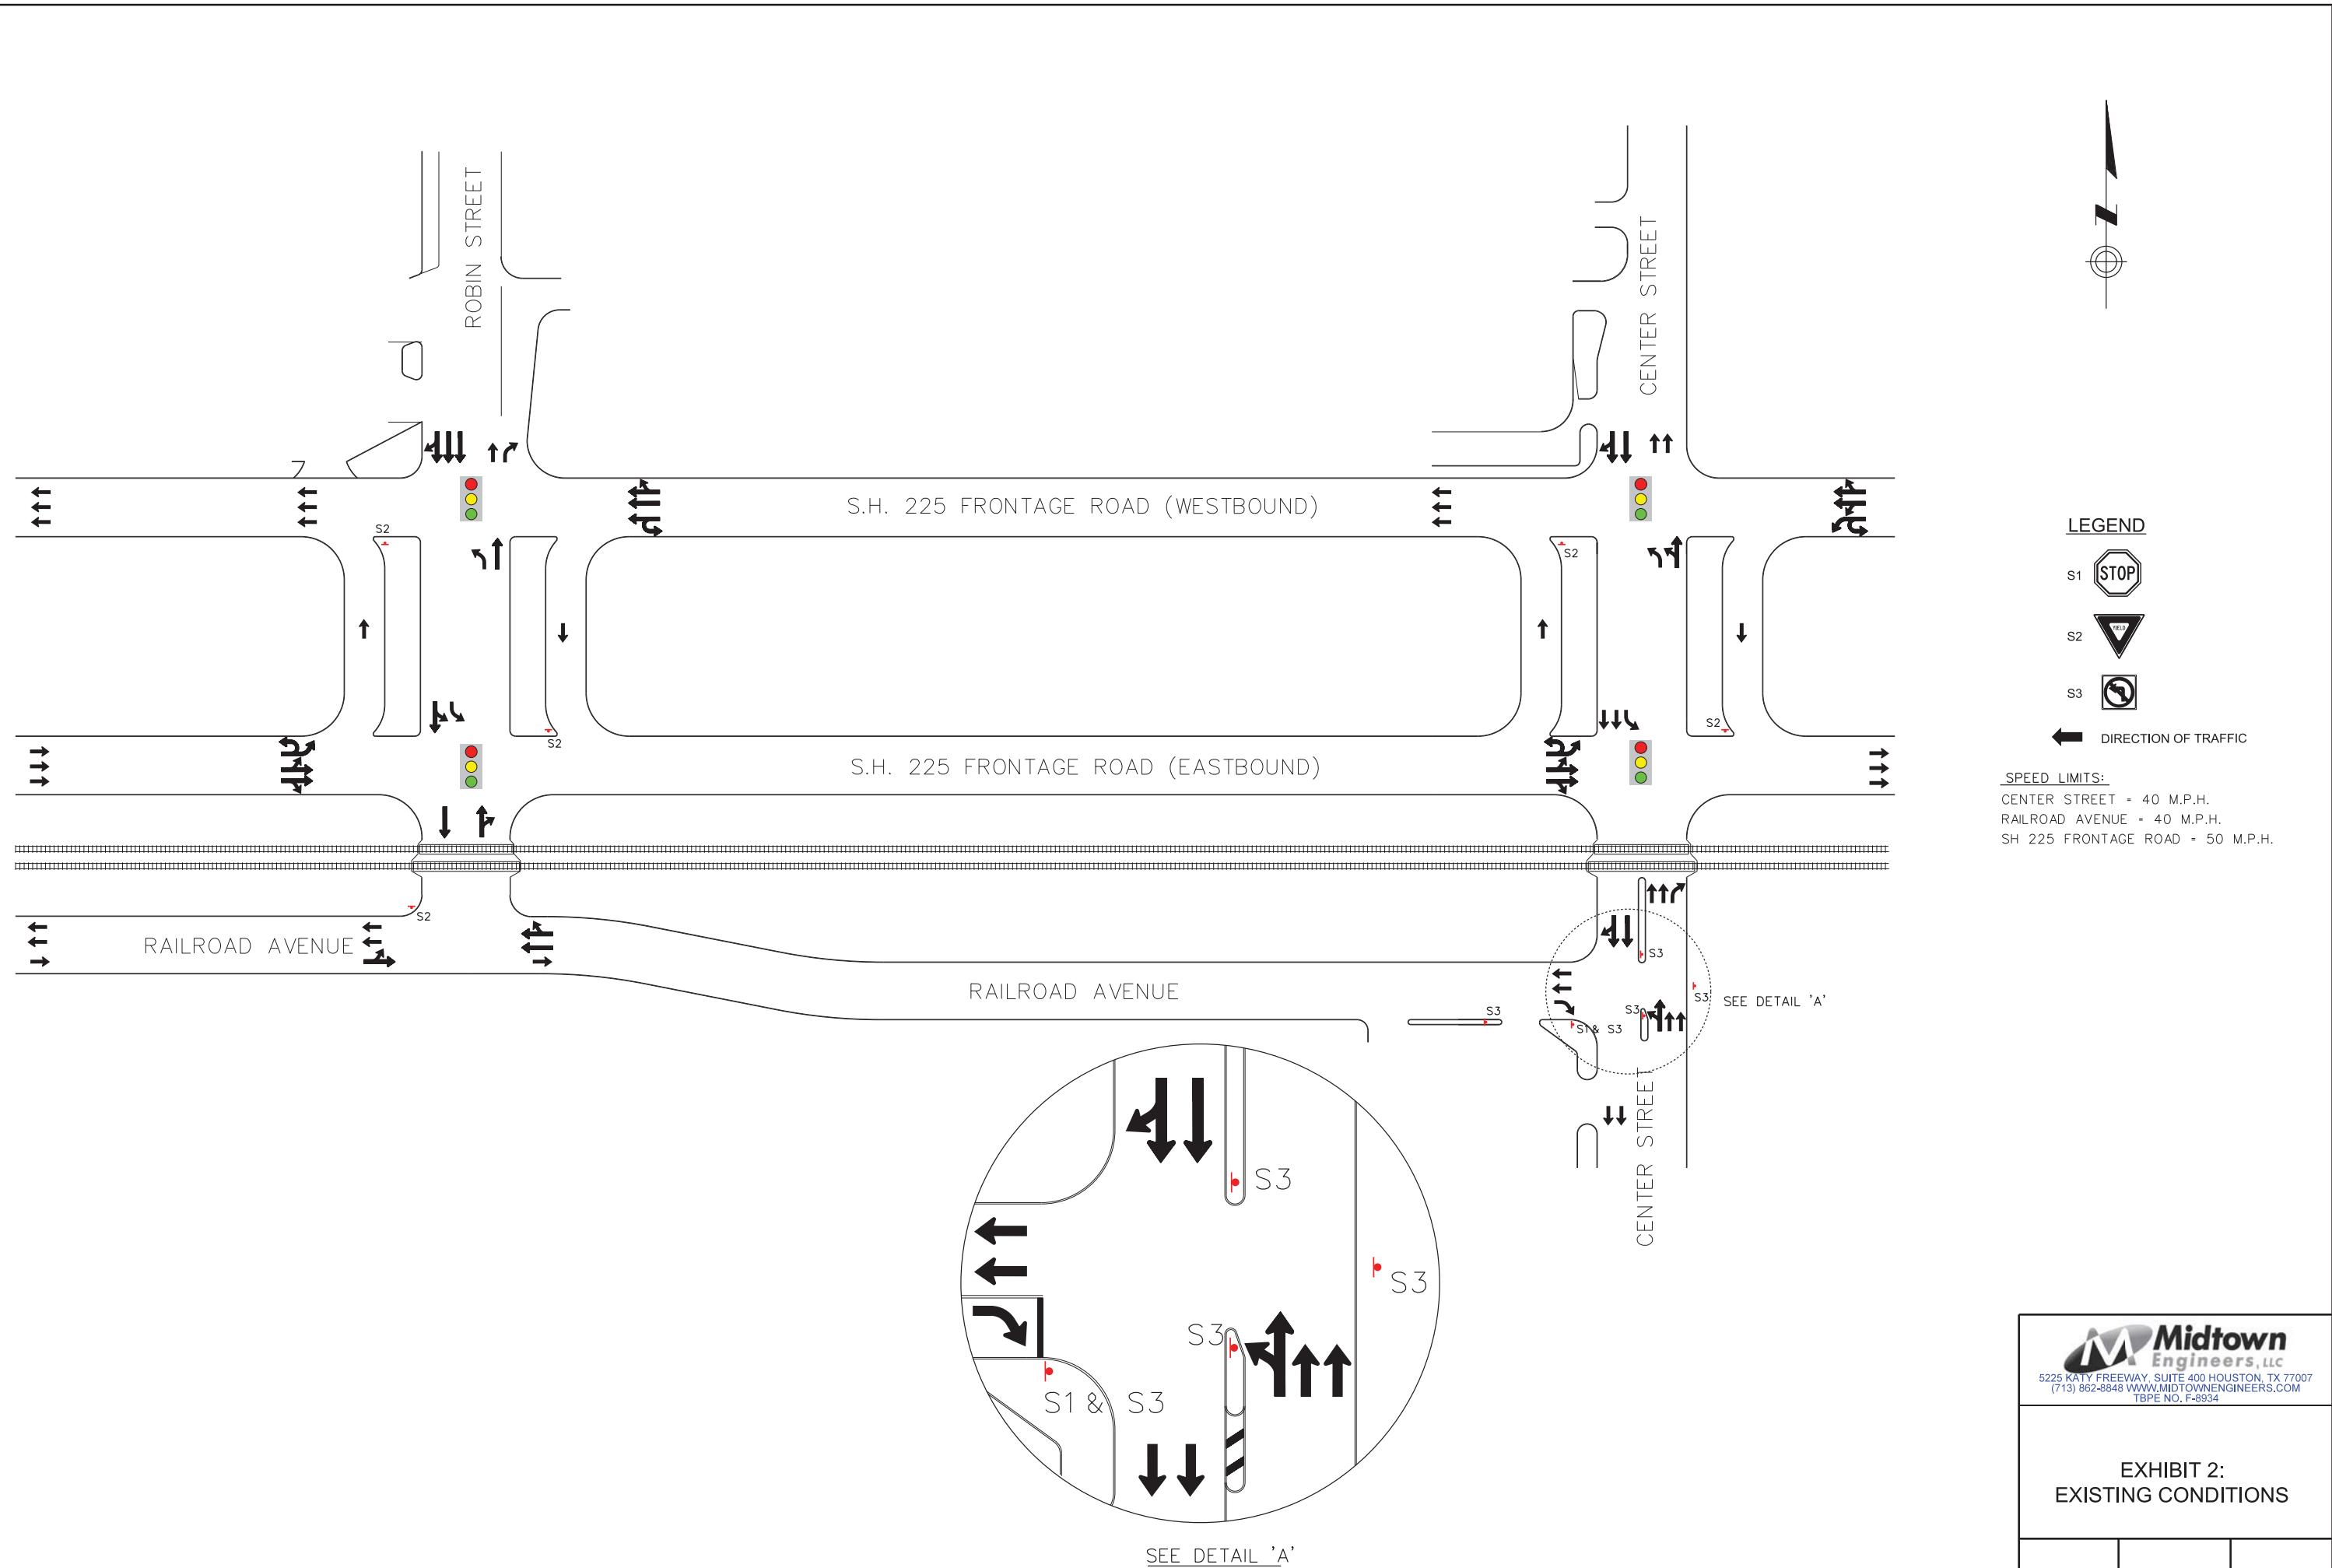

In addition to the recommended Alternatives listed above, the City should consider installing large streetscapes, such as bollards, in the median on Center Street within the study area. The large streetscapes will further prevent large vehicles from jumping the curb to make the illegal left turn.

Intersection Summary

Cycle Length: 60

Actuated Cycle Length: 60

Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Green

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.72

Intersection Signal Delay: 17.6

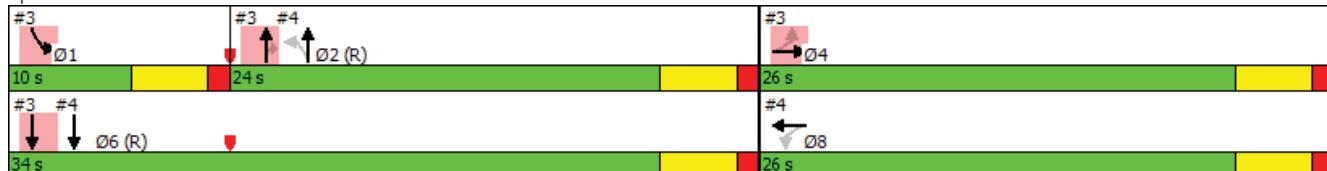

Intersection LOS: B

Intersection Capacity Utilization 64.7%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 4: Center Street & SH225 FR WB
